**Question:** A box contains 5 red marbles, 8 white marbles and 4 green marbles. One marble is taken out of the box at random. What is the probability that the marble taken out will be :

- (i) red ?
- (ii) white ?
- (iii) not green?

(iii) Probability that the marble taken out is not green

$$1 - \Pr(0, 0, 1) = 1 - \frac{{}^5C_0 {}^8C_0 {}^4C_1}{{}^{17}C_1} \quad (8)$$

$$= 1 - \frac{4}{17} = \frac{13}{17} \approx 0.7647 \quad (9)$$

**Solution :**

Number of red marbles = 5

Number of white marbles = 8

Number of green marbles = 4

Total marbles = 5+8+4 = 17

Let

$$N = R + W + G \quad (1)$$

$$n = r + w + g \quad (2)$$

where R,B,G and r, b, g represent the number of red, white and green marbles respectively within N and n. Then :

$$\Pr(r, w, g) = \frac{{}^RC_r {}^WC_w {}^GC_g}{{}^{R+W+G}C_{r+w+g}} \quad (3)$$

(i) Probability that the marble taken out is red

$$\Pr(1, 0, 0) = \frac{{}^5C_1 {}^8C_0 {}^4C_0}{{}^{17}C_1} \quad (4)$$

$$= \frac{5}{17} \approx 0.2941 \quad (5)$$

(ii) Probability that the marble taken out is white

$$\Pr(0, 1, 0) = \frac{{}^5C_0 {}^8C_1 {}^4C_0}{{}^{17}C_1} \quad (6)$$

$$= \frac{8}{17} \approx 0.4706 \quad (7)$$
